Antimicrobial Computer Peripherals

Medical and industrial keyboards and mouse

Hygienic, Antimicrobial, IP68 Dust and Waterproof computer peripherals for Hospitals, Medical Centres, Dental Clinics, Cleanrooms, Computer labs, Schools and industrial application.

- ✓ Hygienic
- ✓ Antimicrobial
- ✓ Dustproof
- ✓ Waterproof
- ✓ Rugged

Fully washable, germ proof, spill and dust-proof

Our Story

SteriClick was founded in 2015 by two Health Professionals in Australia who have a combined 30 years working in the public health system who came to recognise a need for an additional tool in the fight for Infection Control. SteriClick was founded to make available a range of antimicrobial computer peripherals to protect patients, clients and staff alike. As the only local supplier we aim to provide these to both the medical community and any other industry concerned about controlling microbial transmission.

At SteriClick we are committed to providing only high quality products with the highest safety standards and functionality that we ourselves would be happy to use. We seek to provide the best products and the widest range, backed by the best customer service while keeping costs as low as possible.

SteriClick products are tested in Australia at NATA accredited labs to ensure the highest standards in antimicrobial protection.

IP68 water and dust protection with Unique Antimicrobial coating

SteriClick is an Australian company based in Victoria specializing high quality antimicrobial computer peripherals keyboard and mouse, covered in a hard wearing but soft to touch silicon skin impregnated with nano silver particles which destroy microbes (bacteria, fungi etc.) which come into contact with the silicon surface. The cover makes the peripherals water proof and easy to clean, further reducing potential microbial contamination. In addition they feature a fully adjustable back light for low light conditions.

Traditional keyboard designs leave gaps between the keys which are all but impossible to clean effectively, especially since using liquid cleaning products is almost always detrimental to the keyboards operation. Every particle of dust, every flake of skin and every crumb of food which falls into these gaps becomes a breeding ground for microbial infestation, which is then spread to the hands of anyone using the computer. This is horrible in any situation but is of particular concern in industries where the chance for infections to spread is enhanced, the healthcare field in particular.

Our products are tested here in Australia at NATA approved testing facilities, the same facilities that found bacterial counts as high as 330 on traditional hospital keyboards, where SteriClick keyboards in identical conditions returned bacterial counts of less than 10.

In addition to this our peripherals have been cleaned repeatedly with modern hospital grade cleaning solutions, been completely submerged in soapy water on multiple occasions and still continued to operate without pause. The soothing blue backlight is fully adjustable, can be turned off completely and will operate at full capacity continuously if desired without needing a separate power source.
